Professional Summary

Detail-oriented Data Analyst with hands-on experience in Python, SQL, Excel, Power BI, and Tableau for data cleaning, analysis, visualization, and reporting. Experienced in working with large datasets, building SQL ETL pipelines, developing interactive dashboards, validating data, and identifying trends and actionable business insights. Built end-to-end analytics projects involving 170K+ records and practical experience supporting data-driven decision-making through reports, KPI analysis, and business recommendations. Strong analytical and problem-solving skills with a willingness to learn and work with real-world business data.

Professional Experience

- Data Science Intern, Uptricks Services Pvt. Ltd.**02/2026 – 03/2026
- Collected, cleaned, validated, and analyzed a 1,470-record HR dataset containing 35 features, performing missing-value handling, encoding, and data-quality checks.
 - Performed EDA to identify patterns, trends, and key factors influencing employee attrition.
 - Prepared analytical reports and documented data-analysis workflows to improve reporting consistency and communicate findings clearly.
 - Created data visualizations and summaries to support HR decision-making and communicate analytical findings.
 - Assisted with predictive modeling using Logistic Regression, Random Forest, and Gradient Boosting, achieving approximately 85% accuracy.

Education

- Bachelor of Engineering (CSE - AI & ML), Finolex Academy Of Management And Technology**2023 – Present | Ratnagiri

Skills

- Data Analytics:** Data Analysis, Data Extraction, Data Manipulation, Data Cleaning, Data Validation, Data Interpretation, EDA, Statistical Analysis, Root-Cause Analysis, KPI Reporting, Reporting
- Programming & Data:** Python, Pandas, NumPy, SQL (MySQL)
- Databases:** MySQL, Relational Databases, SQL Joins, CTEs, Aggregations
- Data Visualization:** Power BI, DAX, Tableau, Matplotlib, Seaborn
- Machine Learning:** Regression, Classification, Clustering, Feature Engineering, Model Evaluation, Cross Validation, Statistics & Probability (Fundamentals)
- Tools:** Git, GitHub, Jupyter Notebook, Streamlit, ChatGPT/AI Tools

Projects

- Vendor Performance Analysis – Retail Inventory & Sales | SQL • Python • Power BI • Excel** 
- Developed an optimized SQL ETL pipeline using **CTEs, JOINS, and aggregations** to consolidate six relational tables into a business-ready dataset, improving query performance for large-scale analysis.
 - Conducted **exploratory data analysis** and **Welch's t-test (95% confidence intervals)** in Python to evaluate vendor profitability, pricing effectiveness, and inventory turnover.
 - Identified vendor concentration risk, revealing **65.7% of purchases from the top 10 vendors** and **\$2.71M in unsold inventory**, leading to recommendations for supplier diversification and inventory optimization.
 - Built an interactive **Power BI dashboard** using **custom DAX measures** to monitor KPIs, vendor performance, profitability, and procurement trends, enabling data-driven purchasing decisions.
- Supply Chain Delivery Risk Analysis – Global Logistics Performance | Python, SQL, Scikit-learn, Power BI** 
- Analyzed global supply chain operations to identify root causes of delivery delays, quantify financial impact, and support logistics optimization through predictive analytics and executive dashboards.
 - Developed an end-to-end analytics pipeline using **Python (Pandas)** and **SQL** to clean and analyze **172,765 global orders**, identifying a **54.7% late-delivery rate** and demonstrating that delays were driven by **systemic logistics constraints** rather than customer segments or seasonal demand.
 - Performed **Exploratory Data Analysis** and **root-cause diagnostics**, revealing **Central Africa** as the highest-risk region (**58.7% delay rate**) and identifying **First Class (100%)** and **Second Class (82.8%)** shipping as the primary operational bottlenecks, leading to targeted carrier optimization recommendations.
 - Built a **Random Forest** predictive model using **Scikit-learn** and **SMOTE**, achieving **80% accuracy** and **85% precision** for late-delivery prediction, enabling proactive identification of high-risk shipments before dispatch.
 - Designed an **interactive Power BI dashboard** using **custom DAX measures** to monitor delivery performance, profitability, regional risk, shipping efficiency, and predictive insights, translating analysis into strategic recommendations that highlighted **\$2.1M in delay-related financial exposure** and supported data-driven logistics decisions.
- Freight Cost & Invoice Risk Analysis – Logistics Cost Optimization | Python, SQL, Scikit-learn, End-to-End ML Project**
- Developed an end-to-end analytics pipeline using **SQL** and **Python (Pandas)** to consolidate logistics and invoice data, engineering business features for freight cost estimation and invoice risk assessment.
 - Performed **Exploratory Data Analysis (EDA)** and predictive modeling to identify key cost drivers and classify high-risk invoices, supporting proactive financial monitoring and operational planning.
