

SAMIYA KHALID BUDYE

CSE (AI & ML) | Python | Machine Learning | Data Science

+91 75594 04381 • saamia.kb@gmail.com • LinkedIn: linkedin.com/in/samiya-budye-34746b294 • GitHub: github.com/samiyak14 • Ratnagiri, Maharashtra

SUMMARY

CSE (AI & ML) student with 9.94 CGPA and hands-on experience in machine learning, data preprocessing, feature engineering, clustering, and Python application development. Interested in building practical AI-driven solutions.

EDUCATION

B.E. Computer Science Engineering (AI & ML) — Finolex Academy of Management and Technology | Mumbai University | 2023–2027

CGPA: 9.94/10 | **Rank 1 in all semesters** |

Class XII (CBSE) | Indian Public School, Kuwait | 2010–2022

12th %: 93.2 **10th %:** 92.4

SKILLS

Languages: Python, C, Java, SQL

Libraries/Frameworks: Pandas, NumPy, Scikit-learn, Matplotlib, Plotly, Flask, Streamlit

ML: Classification, Clustering, Feature Engineering, PCA, Anomaly Detection

Tools: Git, Jupyter Notebook, Excel

EXPERIENCE

AI/ML Intern — Jazeera Airways, Kuwait | June 2026

- Built K-Means customer segmentation models on 10,000+ booking records and evaluated clusters using silhouette analysis.
- Applied preprocessing, frequency encoding, feature engineering, and PCA to high-dimensional customer data.
- Analyzed segments to support customer personalization and ancillary revenue recommendations.

PROJECTS

Energy Theft Detection Dashboard | Python, Scikit-learn, Streamlit, Plotly

- Used Isolation Forest for anomaly detection and K-Means for consumption pattern analysis.
- Built an interactive Streamlit dashboard to visualize usage patterns and anomalies.

AI-Based Traffic Signal Optimization | Python, Reinforcement Learning, PPO, SUMO, TraCI

- Developed an adaptive traffic signal control system using PPO reinforcement learning to optimize signal phases based on traffic conditions.
- Integrated SUMO and TraCI to simulate traffic and evaluate the adaptive system against fixed-time signal control.

Customer Churn Prediction | Python, Pandas, Scikit-learn

- Built classification models using Logistic Regression and Random Forest to predict customer churn.
- Performed preprocessing, feature engineering, model evaluation, and feature-importance analysis.
